No parts of this publication shall be reproduced, stored or distributed in any form or by any means either on paper or electronic without express written notice and approval of Startup Business Foundation.

## **ACKNOWLEDGMENT**

Startup Business Foundation is thankful to all organizations and individuals who have helped in several ways in preparation of this prefeasibility study.

We also wish to extend our gratitude to all those who reviewed the content and provided valuable inputs for improving the quality, coherence, and content presentation of this prefeasibility study.

## **ABOUT THIS REPORT**

This prefeasibility study is designed to provide potential and startups entrepreneurs' valuable information on setting up envelop paper manufacturing business in the manufacturing industry of Nigeria's market; aimed at encouraging and facilitating industrial activities across the country. It is our realization that industrialization is at the heart of economic development and that every effort has to be made to bring about industrial growth and encourage our people to be part of it.

The envelop paper business show over 80% local content in terms of availability of raw material, equipment and machinery, manpower and other requirements.

The key areas covered in this report include:

- i) Technical and economic analysis of the production, marketing and profitability of the project.
- ii) Recommendations in respect of procurement of equipments and associated problems.
- iii) Recommendation on suitable agronomic management practices to ensure efficient running of the projects.
- iv) Detailed financial analysis including project cash flows for the projects.

This prefeasibility report provides a comprehensive and detailed coverage of the above terms of reference and is designed to facilitate investment decisions.

The implementation of this project will also impact positively on the economy of the immediate community where the project is located. This is in terms of employment-direct and indirect, skilled and unskilled. Government also stands to benefit from internal revenue from taxation.

In view of the result of the analysis using some economic indicators as stated in the proposed project, it is hereby recommended that the project is viable.

## PART I

### EXECUTIVE SUMMARY

This particular prefeasibility study is on setting paper envelop where it is most suitable in any part of the country.

Paper envelopes are stationery products that can easily be marketed as the users and consumers are very many such as government organizations, schools, courier organizations and individual consumers.

In the location of the factory, the entrepreneur should consider majorly access to market for the finished products, given that the project has little requirement for electricity among others.

The production is projected based on 5,000 pieces of paper envelopes daily which translates to 1,560,000 per annum, working 312 days per year at 60% capacity utilization.

The establishment of this project requires total investment costs of N2,275,900, capital cost of N869,000 and working capital of N1,200,000. Nevertheless, the scale of the investment depends on the amount available for the project.

#### 1.1 SUMMARY OF TOTAL PROJECT COST

S/N	DESCRIPTION	COST TO BE INCURRED	COST TO BE INCURRED	TOTAL
1	Land & Building	-	200,000	200,000
2	Machinery & Equipments	-	128,020	519,000
3	Office Equipment	-	150,000	150,000
	<b>TOTAL CAPITAL COST</b>	-	<b>478,020</b>	<b>869,000</b>
4	Working capital	-	1,200,000	1,200,000
5	10% Contingencies & preliminary expenses	-	206,900	206,900
	<b>Total project cost</b>	-	<b>1,884,920</b>	<b>2,275,900</b>

#### 1.2 FINANCIAL ACCOUNTING RATIOS ANALYSIS

##### PERFORMANCE RATIOS AVERAGES

- (a) Return on Sales = 15%
- (b) Return on Equity = 5,468%
- (c) Return on Investment = 663%
- (d) Positive NPV = N53,666,121
- (e) IRR = 46%
- (f) ARR = 633%
- (g) Payback Period = 9 months

## **PART II**

### **MARKET ANALYSIS**

#### **2.1 INTRODUCTION**

Paper envelopes play an important role as a stationery material in any type of correspondence. The basic raw material is paper. Mostly, white or brown papers are utilized for this purpose. These are used in post offices, commercial centres, advertisements and in sampling. It is estimated that the consumption is on higher side in comparison to present production.

#### **2.2 MARKET AREA ANALYSIS**

An envelope is a flat, flexible container, made of paper or similar material that has a single opening and a flap that can be sealed over the opening. The envelope is usually sealed by wetting an area of the flap. Some envelopes are sealed with a metal fastener. Others are sealed with a piece of string that wraps around flat, circular pieces of cardboard attached to the envelope. A recent development in envelopes is a thin strip of plastic, which is removed to reveal an area of the flap with an adhesive that does not need moistening.

#### **2.3 DEMAND AND SUPPLY ANALYSIS**

Currently the demand for envelop are surged following the increase in literacy level. Similarly, envelop products have a high demand by many institutions such as: schools, Government bodies, Stationery shops, NGOS and individual buyers.

The demand is expected to grow on account of an anticipated pick-up from the education sector with improving literacy rates and growing enrolment as well as increasing number of schools and colleges.

#### **2.4 TARGET MARKET ANALYSIS**

The market for envelop is wide as it is used by many organization mostly official purpose, therefore, the market exist in every part of the country. Nevertheless, the entrepreneur needs to engage distributors and marketer that will place bulk order on a regular basis for the product.

### **PART III**

#### **TECHNICAL ANALYSIS**

##### **3.1 PRODUCT DESCRIPTION**

Envelopes are almost always rectangular, but they exist in a wide range of sizes. The two main styles used are banker envelopes, which have the opening on the long side, and pocket envelopes, which have the opening on the short side. In Nigeria, standard sizes range from size 10" x 13" or 9" x 12". To insert A5 contents, you may choose envelopes with size 6" x 9". For A4 contents folded into 3 panels, the common size of envelopes would be 4.5" x 9.7" or 4.75" x 9.5". Some envelopes have one or more windows cut into the front to allow addresses written on sheets inside to be seen. These windows may be covered with a transparent material.

##### **3.2 LOCATION ANALYSIS**

Given the nature of the paper envelop as it serves as necessitate to every organization for official documentation and presentation, the product has less market presence in the rural areas compare to metropolitan cities where many offices and institutions are location. Therefore, the location of the factory would be best located near the city in any part of the country.

##### **3.2 RAW MATERIALS**

Most envelopes are made from paper. Paper used for most envelopes is made from wood. Modern technology allows the wood to come from almost any kind of tree. Paper used to make very high quality envelopes, such as those used to enclose formal invitations, may be made partly or completely from cotton or linen.

##### **3.3 PRODUCTION CAPACITY**

Production costs assumed daily capacity of producing 5,000 pieces of paper envelopes which translates to 1,560,000 per annum, working 312 days per year at 60% capacity utilization.

##### **3.4 TECHNOLOGY & PROCESS**

A paper cutting machine is used to cut different paper pieces to sizes as wanted by the operator for the type and size of envelopes to be produced. Binding glue is then applied to the cut sides of the paper and later they are joined together. Labeling can be done thereafter. The envelopes are then packed ready for distribution.

##### **3.5 SOURCES OF FUNDS**

The project can be funded through a number of sources which include but not limited to the following; Agric-Business, Small & Medium Scale Investment Scheme (AGSMEIS), Bank of Industry, grants etc., though the conditions and criteria for accessing the loans and grants varies.

## **PART IV**

### **FINANCIAL ANALYSIS**

Basically, the financial section of this prefeasibility study consists of three financial statements: Income statement, Balance sheet, Cash flow projection. This section determines whether or not the project is viable using some economic indicators such as Net Present Value (NPV), Internal Rate of Return (IRR), and payback period as are detailed in the appendices below.

#### **ASSUMPTIONS**

1. Assuming that the project will last for the period of five years and the salvage value at the end of the project life ignored.
2. The Machineries, Equipments and Utility Equipment have uniform depreciation of 20%.
3. Production costs assumed daily capacity of producing 5,000 pieces of paper envelopes which translates to 1,560,000 per annum, working 312 days per year at 60% capacity utilization.
4. The proposed capacity utilization are 60% in the first year of commercial production, 70%, 80% in the 2<sup>nd</sup> and 3<sup>rd</sup> year respectively and 90% in the 4<sup>th</sup> and 5<sup>th</sup> years.
5. Raw materials will be sourced locally and Market for the product is readily available.
6. Staff and labour cost will increase by 10% yearly.
7. Prices and unit costs are assumed unchanged in the five years of projection.
8. The valuation currency used is Naira.

#### **4.2 ACCOUNTING /FINANCIAL ANALYSIS**

##### **4.2.1 NET PROFIT**

The projected Annual Trading Profit and Loss Account is proposed to make the following Net Profit after tax during the corresponding projected periods – all things being equal.

##### **4.2.2 NET PRESENT VALUE (NPV)**

NPV is one of the four methods of discounted cash flows techniques which state that money that is immediately available for use, has a greater value than same amount receivables in future date.

Using this method however, all net cash inflows will be discounted to present value using the estimated interest rate of 60% discount factor. At 12% discount factor the project produced a positive **NPV NGN 53,666,121**

#### 4.2.3 INTERNAL RATE OF RETURN (IRR)

This is the discount rate which gives zero NPV or the rate which equates the present value of cash inflows with present value of cash outflows of the project.

The cash flow of this project was discounted systematically until the NPV of the project finally become zero. The project produces the **IRR** of **46.2%**. Thus, the project accepted as being viable. This is because **IRR** is more than the cost of capital.

#### 4.2.4 ACCOUNTING RATE OF RETURN (ARR)

ARR uses accounting information as revealed by financial statements (Income Statement) to measure profitability of the project under consideration. The forecast **ARR** of the project is **663%**.

#### 4.2.5 PROFITABILITY INDEX (PI)

This is the present value of future cash flows over the present value of cash outlays. The project PI further confirm the viability of the project , because as the rules of the accepting and rejecting hold, a project should be accepted if the PI is equal or greater than one (1). Consequently, the PI of this project is **1.72** and thus recommended as being viable to be accepted for financing.

**APPENDIX  
TOTAL PROJECT COST**

	DESCRIPTION	QTY	Unit price	Total
	<b>LAND &amp; BUILDING</b>
