Startup Business Foundation shall have no liability of errors or inadequacies in the information contained herein or for interpretations thereof. Every effort has been made to trace owners of the copyright material included in the book. The publishers would be grateful for any omissions brought to their notice for acknowledgements in future editions of the study. No entity of Startup Business Foundation shall be responsible for any loss whatsoever, sustained by any person who relies on this material. The material in this publication is copyrighted. No parts of this publication shall be reproduced, stored or distributed in any form or by any means either on paper or electronic without express written notice and approval of Startup Business Foundation.

**ACKNOWLEDGMENT**

Startup Business Foundation is thankful to all organizations and individuals who have helped in several ways in preparation of this prefeasibility study.

We also wish to extend our gratitude to all those who reviewed the content and provided valuable inputs for improving the quality, coherence, and content presentation of this prefeasibility study.

## ABOUT THIS REPORT

This prefeasibility study is designed to provide potential and startups entrepreneurs' valuable information on setting up plastic recycling business in the manufacturing industry of Nigeria's market; aimed at encouraging and facilitating industrial activities across the country. It is our realization that industrialization is at the heart of economic development and that every effort has to be made to bring about industrial growth and encourage our people to be part of it.

The plastic recycling business has over 80% local content in terms of availability of raw material, equipment and machinery, manpower and other requirements.

The key areas covered in this report include:

- i) Technical and economic analysis of the production, marketing and profitability of the project.
- ii) Recommendations in respect of procurement of equipments and associated problems.
- iii) Recommendation on suitable agronomic management practices to ensure efficient running of the projects.
- iv) Detailed financial analysis including project cash flows for the projects.

This prefeasibility report provides a comprehensive and detailed coverage of the above terms of reference and is designed to facilitate investment decisions.

The implementation of this project will also impact positively on the economy of the immediate community where the project is located. This is in terms of employment-direct and indirect, skilled and unskilled. Government also stands to benefit from internal revenue from taxation.

In view of the result of the analysis using some economic indicators as stated in the proposed project, it is hereby recommended that the project is viable.

## PART I

### EXECUTIVE SUMMARY

This particular prefeasibility study is for setting up plastic recycling and marketing industry in most suitable part of Nigeria.

This manufacturing process of plastic recycling refers to the process of recovering waste or scrap plastic and reprocessing it into useful products such as Ladies shoes, Soles, Front heels, Hind Heels, Sandals etc.

There is high demand for products due to the growing demand for Plastic products, as a result of low cost and durability in relation to usage. This can said to be lucrative venture but requires good skills and expertise in the plastic manufacturing industry and strategic marketing concepts.

The setup of the factory could be done in any part of country given the readily availability of the raw material (non biodegradable plastics). Nevertheless, the entrepreneur should consider parameters that could low cost of production like power supply & skilled labour.

The production capacity of the plant is based on 36,400 plastic products per month which translates into 436,800 products per year at 60% capacity utilization.

#### 1.1 SUMMARY OF TOTAL PROJECT COST

S/N	DESCRIPTION	COST INCURRED	COST TO BE INCURRED	TOTAL
1	Land & building	-	600,000	600,000
2	Machinery & equipment	-	5,050,000	5,525,000
3	Utility equipment	-	1,850,000	1,850,000
4	Office equipment	-	350,000	350,000
5	Vehicle	-	2,800,000	2,800,000
	<b>Total Cost of capital</b>	-	<b>10,650,000</b>	<b>11,125,000</b>
6	Working capital	-	1,500,000	1,500,000
7	10% Contingencies & preliminary expenses	-	1,262,500	1,262,500
	<b>Total project cost</b>	-	<b>13,412,500</b>	<b>13,887,500</b>

#### 1.2 FINANCIAL ACCOUNTING RATIOS ANALYSIS

##### PERFORMANCE RATIOS AVERAGES

- (a) Return on Sales = 17%
- (b) Return on Equity = 192%
- (c) Return on Investment = 82%
- (d) Positive NPV = ₦40,235,053
- (e) IRR = 47%
- (f) ARR = 81%
- (g) Payback Period = 1 year and 5 months

## **PART II**

### **MARKET ANALYSIS**

#### **2.1 INTRODUCTION**

Plastic is playing a huge role in our lives from usage as plastic bottles to toothbrush, mug, bucket, tub, containers, polybag, and many more. The usage of plastic has kept on rising years after years and now time has come that we cannot live without them. Plastic is a known non-biodegradable substance which means that it is not possible to break it through natural means. Similarly, plastic is a toxic substance because when it mixes in the atmosphere it causes pollution. Scientists are quite worried about the rise in plastic waste as they are unable to decompose them in comparison to the waste generation.

#### **2.2 MARKET AREA ANALYSIS**

Markets and uses for recycled plastics are rapidly expanding. Plastic containers are being collected at the curb for recycling in over 500 communities in different parts of Nigeria, representing more than 4 million households. Demand for recycled plastic will continue to expand and new markets will develop as technologies permit the efficient segregation and reprocessing of high-purity resins. Improved quality of resins, environmental issues and higher prices for virgin resin will contribute to growth.

#### **2.3 INDUSTRY ANALYSIS**

The plastics industry has developed considerably since the invention of various routes for the production of polymers from petrochemical sources. Plastics have substantial benefits in terms of their low weight, durability and lower cost relative to many other material types. There is a growing demand for Plastic products across the country. Crushed materials of plastics can also be sold to other big companies in form of raw materials. A major portion of plastic produced each year is used to make disposable items of packaging or other short-lived products that are discarded within a year of manufacture.

#### **2.4 TARGET MARKET ANALYSIS**

The market for these products is not limited to any segment of the society. However, the products usage can be categorized into domestic, commercial and industrial purposes. Therefore, the enterprise should conduct market research to analyze the consumers demand in the given environment to ascertain the area of production concentrations. Similarly, there are some major players in the plastic manufacturing industry, but good business model such as targeted production, designs and packaging with strategic marketing concepts, the enterprises will be able to create considerable market niche.

## **PART III**

### **TECHNICAL ANALYSIS**

#### **3.0**

##### **3.1 PRODUCT DESCRIPTION**

Plastic recycling refers to the process of recovering waste or scrap plastic and reprocessing it into useful product. Due to the fact that plastic is non-biodegradable, it is essential that it is recycled as part of the global efforts to reducing plastic and other solid waste in the environment. Similarly, recycling is one of the most important actions currently available to reduce these impacts and represents one of the most dynamic areas in the plastics industry today. Recycling provides opportunities to reduce oil usage, carbon dioxide emissions and the quantities of waste requiring disposal.

##### **3.2 PROJECT LOCATION**

This project can be sited in any part of Nigeria. This is because non biogradable plastic containers and sachets are littered everywhere in different cities and rural areas; therefore the project can be sited in any part of the country. The major consideration for setting up plastic recycling project is constant supply of electricity in the area.

##### **3.3 PRODUCTION CAPACITY**

The plant has an installed daily production capacity of 500 Sealing Wax assumed to be 60% production capacity, working 312 days annually.

##### **3.4 PRODUCTION PROCESS**

The production process involves cleaning waste plastic, sorting plastics according to their grades, cutting to small pieces, extruding or crushing the plastics to get required sizes of granules. Chemicals are mixed with the crushed plastic to reinstate its originality.

The mixture is then put into a boiler, melted before transfer into the injection machine that sends it to the molding machine. The finished product is removed from the molds, taken for trimming and packed.

##### **3.5 RAW MATERIALS**

The Recycling materials (plastic waste) will be picks up by road hustlers from different locations and delivers to central collection centre (recycling yard).

### 3.6 SOURCES OF FUNDS

The project can be funded through a number of sources which include but not limited to the following; Agric-Business, Small & Medium Scale Investment Scheme (AGSMEIS), Bank of Industry (BOI), International Finance Corporation, grants etc., though the conditions and criteria for accessing the loans and grants varies.

## PART IV

### FINANCIAL ANALYSIS

#### 4.0

Basically, the financial section of this prefeasibility study consists of three financial statements: Income statement, Balance sheet, Cash flow projection. This section determines whether or not the project is viable using some economic indicators such as Net Present Value (NPV), Internal Rate of Return (IRR), and payback period as are detailed in the appendices below.

#### 4.1 ASSUMPTIONS

1. Assuming that the project will last for the period of five years and the salvage value at the end of the project life ignored.
2. The Machineries, Equipments and Utility Equipment have uniform depreciation of 20%.
3. Production costs assumed 312 days per year with a daily capacity of 500 Sealing Wax assumed to be 60% production capacity.
4. The proposed capacity utilization are 60% in the first year of commercial production, 70%, 80% in the 2<sup>nd</sup> and 3<sup>rd</sup> year respectively and 90% in the 4<sup>th</sup> and 5<sup>th</sup> years.
5. Raw materials will be sourced locally and Market for the product is readily available.
6. Staff and labour cost will increase by 5% yearly.
7. Prices and unit costs are assumed unchanged in the five years of projection.
8. The valuation currency used is Naira.

#### 4.2 ACCOUNTING /FINANCIAL ANALYSIS

##### 4.2.1 NET PROFIT

The projected Annual Trading Profit and Loss Account is proposed to make the following Net Profit after tax during the corresponding projected periods – all things being equal.

##### 4.2.2 NET PRESENT VALUE (NPV)

NPV is one of the four methods of discounted cash flows techniques which state that money that is immediately available for use, has a greater value than same amount receivables in future date.

Using this method however, all net cash inflows will be discounted to present value using the estimated interest rate of 60% discount factor. At 12% discount factor the project produced a positive **NPV NGN 40,235,053**

##### 4.2.3 INTERNAL RATE OF RETURN (IRR)

This is the discount rate which gives zero NPV or the rate which equates the present value of cash inflows with present value of cash outflows of the project.

The cash flow of this project was discounted systematically until the NPV of the project finally become zero. The project produces the **IRR** of **47%**. Thus, the project accepted as being viable. This is because **IRR** is more than the cost of capital.

#### **4.2.4 ACCOUNTING RATE OF RETURN (ARR)**

ARR uses accounting information as revealed by financial statements (Income Statement) to measure profitability of the project under consideration. The forecast **ARR** of the project is 81%.

#### **4.2.5 PROFITABILITY INDEX (PI)**

This is the present value of future cash flows over the present value of cash outlays. The project PI further confirm the viability of the project , because as the rules of the accepting and rejecting hold, a project should be accepted if the PI is equal or greater than one (1). Consequently, the PI of this project is **1.72** and thus recommended as being viable to be accepted for financing.

# **APPENDIX I** **TOTAL PROJECT COST**

S/N	DESCRIPTION	QTY	UNIT PRICE	AMOUNT
	<b>LAND &amp; BUILDING</b>			
1	Renting of office space	1	600,000	600,000
	<b>Sub total</b>	<b>1</b>	<b>600,000</b>	<b>600,000</b>
	<b>MACHINERY &amp; EQUIPMENT</b>			
2	Weighing scale	1	25,000	25,000

<b>Average Profit</b>	<b>11,304,533.8</b>		

## APPENDIX XII FORECAST IRR AND ARR COMPUTATION

$$IRR = a + \left( \frac{A}{A+B} \right) * (b-a)$$

$$A+B$$

Where

$$a = 12\%$$

$$b = 60\%$$

$$A = 40,235,053$$

$$B = 16,199,240$$

$$12\% + \frac{40,235,053}{40,235,053 + 16,199,240} (60-12)$$

$$40,235,053 + 16,199,240$$

$$12\% + 34.4$$

$$46\%$$

$$ARR = \frac{\text{Estimated Average Profit}}{\text{Estimated initial investment}} * 100$$

$$ARR = \frac{11,304,533.8}{13,887,500} * 100$$

$$81\%$$
