Startup Business Foundation shall have no liability of errors or inadequacies in the information contained herein or for interpretations thereof. Every effort has been made to trace owners of the copyright material included in the book. The publishers would be grateful for any omissions brought to their notice for acknowledgements in future editions of the study. No entity of Startup Business Foundation shall be responsible for any loss whatsoever, sustained by any person who relies on this material. The material in this publication is copyrighted. No parts of this publication shall be reproduced, stored or distributed in any form or by any means either on paper or electronic without express written notice and approval of Startup Business Foundation.

**ACKNOWLEDGMENT**

Startup Business Foundation is thankful to all organizations and individuals who have helped in several ways in preparation of this prefeasibility study.

We also wish to extend our gratitude to all those who reviewed the content and provided valuable inputs for improving the quality, coherence, and content presentation of this prefeasibility study.

## ABOUT THIS REPORT

This prefeasibility study is designed to provide potential and startups entrepreneurs' valuable information on setting up fruit squashing business in the Renewable Energy (RE) industry of Nigeria's market; aimed at encouraging and facilitating industrial activities across the country. It is our realization that industrialization is at the heart of economic development and that every effort has to be made to bring about industrial growth and encourage our people to be part of it.

Fruit squashing business has over 80% local content in terms of availability of raw material, equipment and machinery, manpower and other requirements.

The key areas covered in this report include:

- i) Technical and economic analysis of the production, marketing and profitability of the project.
- ii) Recommendations in respect of procurement of equipments and associated problems.
- iii) Recommendation on suitable agronomic management practices to ensure efficient running of the projects.
- iv) Detailed financial analysis including project cash flows for the projects.

This prefeasibility report provides a comprehensive and detailed coverage of the above terms of reference and is designed to facilitate investment decisions.

The implementation of this project will also impact positively on the economy of the immediate community where the project is located. This is in terms of employment-direct and indirect, skilled and unskilled. Government also stands to benefit from internal revenue from taxation.

In view of the result of the analysis using some economic indicators as stated in the proposed project, it is hereby recommended that the project is viable.

## PART I

### EXECUTIVE SUMMARY

#### 1.1

This particular prefeasibility study is for manufacturing and marketing of Power Invertors. Electricity demand estimates and projections for Nigeria suggest that demand is already substantial and increasing rapidly due to population and income growth. According to experts, the following assertions were made about Nigeria's electricity demand;

- Nigeria is one of the most underpowered countries in the world, with actual consumption 80% below expectations based on current population and income levels.
- Peer countries consume far more electricity per capita than Nigeria does currently. Ghana consumes over twice as much, Tunisia over ten times, and South Africa almost thirty times as much.
- Self-generation in Nigeria is extremely prevalent; nearly 14GW capacity exists in small scale diesel and petrol generators, and nearly half of all electricity consumed is self-generated. This implies a huge unserved demand.

This is micro enterprise project. It can be sited in the metropolitan area in any city in Nigeria with consideration to availability skilled manpower and access to raw materials.

This business idea is premised on production of 15 Invertors per month which translates into 180 Invertors per year.

#### 1.2 SUMMARY OF TOTAL PROJECT COST

S/N	DESCRIPTION	QTY	UNIT PRICE	TOTAL
1	Land and building		250,000	250,000
2	Machinery & equipment		26,250	82,500
3	Utility equipment		250,000	250,000
4	Office equipment		200,000	200,000
	<b>Total Capital Cost</b>		<b>2,126,250</b>	<b>2,182,500</b>
5	Working capital		1,400,000	1,400,000
6	10% contingencies & preliminary expenses		218,250	218,250
	<b>Total Project Cost</b>		<b>2,344,500</b>	<b>2,400,750</b>

#### 1.3 FINANCIAL ACCOUNTING RATIOS ANALYSIS

##### PERFORMANCE RATIOS AVERAGES

- (a) Return on Sales = 26%
- (b) Return on Equity = 268%
- (c) Return on Investment = 91%
- (d) Positive NPV = ₦19,234,826
- (e) IRR = 47%
- (f) ARR = 91%
- (g) Payback Period = 10 months

## **PART II**

### **MARKET ANALYSIS**

#### **2.1 INTRODUCTION**

The electrical power production in our country is much less than the demand. It is true that federal government is making efforts to bridge the gap between demand and supply by inviting private sector participation, the condition is expected to continue as demand is growing at a much further pace. Railway, telecom, industrial clusters, computer institute, Bank, ATM counter, Medical equipment are the major commercial sector that uses the inverter for standby power supply.

With the demand for power backup devices like inverters systems increasing at a fast pace, many players, including a large number of SMEs, are venturing into manufacturing these devices, while those already established in the sector, are planning to expand their existing facilities.

#### **2.2 MARKET AREA ANALYSIS**

The Inverters market in Nigeria have witnessed a growth in recent years on account of rising demand fueled by the demand and supply gap in electric power supply, expansion of industries, and rising income levels of consumers.

The market is highly fragmented in Nigeria; however, it is dominated by large organized players. Small scale players are also doing very well in this market. The usage of UPS in the household sector where PCS is installed is also increasing.

According to experts, the power market in Nigeria is expected to grow at a CAGR of approximately 12.39% during the forecast period of 2019 – 2024. Thus, inverter manufacturing is a profitable and viable investment opportunity for small business entrepreneurs.

#### **2.3 DEMAND AND SUPPLY ANALYSIS**

There is an ever-increasing demand for Invertors due to power shortages and interruptions. The rapid economic growth and rising disposable incomes of individuals in the country have enabled them to spend more on products like power inverters, which enhance their lifestyles and provide comfort. Along with this, with rapid urbanization and growing electrification rates, most people nowadays rely on electronic appliances and gadgets. This has resulted in a significant need for an uninterrupted power supply, in turn increasing the sales of power inverters as an alternate backup solution in case of outages.

Besides this, they are noise-free and environment-friendly in nature as they do not emit carbon emissions and eliminate the need for gasoline, which is required for running generators.

#### 2.4 TARGET MARKET ANALYSIS

Given the increasing demand for the products and services, no segment of the society is left out of the market. However, the affordability is another important factor to be considered as the cost of product is slightly high.

In this regards, the entrepreneur should target academic institutions, banks, hospitals, corporate organization as well as the general public.

## **PART III**

### **TECHNICAL ANALYSIS**

#### **3.1 PRODUCT DESCRIPTION**

An inverter is an electric device that changes direct current (DC) to alternating current (AC). This conversion may be accomplished by electromechanical means namely motor, Generator sets entirely by electronics means.

The following are types of inverter manufacturing specifications < 5KW, 5KW to 95KW, 100KW to 495KW, above 500KW. These can be applied on Motor Drives, Uninterruptible Power Supply (UPS), Rail Traction, Wind Turbines, Electric Vehicles/Hybrid Electric Vehicles (EVs/HEVs), Solar PVs etc.

#### **3.2 LOCATION ANALYSIS**

The project can be sited in any part of the country most especially at the metropolitan city. Owing to the increasing demand for alternative sources of power supply, the product and service of inverter is a veritable part of the modern society today.

#### **3.3 RAW MATERIALS**

The performance required for raw materials depends on the different features of power inverter. Raw materials must be able to produce good results. It is important to understand what is important to the properties of raw materials and how they affect these factors if manufacturers are to obtain reliable and correct quality. Raw materials should meet the needs of overseas technology.

The following are some raw materials required for manufacturing of inverter system, resistors, diodes, capacitors, switches, transistors, mosfet, heat Sink, ICs, LED, connectors, auto wires, wire & sleeves, relays, lug, cabinet etc.

#### **3.4 PRODUCTION PROCESS**

This manufacturing operation does not demand a lot of space. The assembling process is also simple. Inverters find applications where emergency standby power is required and/or there is no AC power available. The inverter is generally used with various sophisticated electronic and mechanical equipment that requires a continuous and un-fluctuating power supply for effective functioning.

Production process involves making a metallic box, sealing all its corners with solidal welding, building the oscillator, Inverter system, charging system and automatic system, putting in switches and sockets.

### 3.4 SOURCES OF FUNDS

The project can be funded through a number of sources which include but not limited to the following; Agric-Business, Small & Medium Scale Investment Scheme (AGSMEIS), Bank of Industry, Nigeria Export-Import (NEXIM) Bank, International Finance Corporation (IFC), grants etc., though the conditions and criteria for accessing the loans and grants varies.

## PART IV FINANCIAL ANALYSIS

Basically, the financial section of this prefeasibility study consists of three financial statements: Income statement, Balance sheet, Cash flow projection. This section determines whether or not the project is viable using some economic indicators such as Net Present Value (NPV), Internal Rate of Return (IRR), and payback period as are detailed in the appendices below.

### ASSUMPTIONS

1. Assuming that the project will last for the period of five years and the salvage value at the end of the project life ignored.
2. The Machineries, Equipments and Utility Equipment have uniform depreciation of 20%
3. Production capacity assumed is for 312 days per year with monthly capacity of 150 assumed to be 60% installed capacity.
4. The proposed capacity utilization are 60% in the first year of commercial production, 70%, 80% in the 2<sup>nd</sup> and 3<sup>rd</sup> year respectively and 90% in the 4<sup>th</sup> and 5<sup>th</sup> years.
5. Raw materials will be sourced locally and Market for the product is readily available.
6. Staff and labour cost will increase by 10% yearly.
7. Prices and unit costs are assumed unchanged in the five years of projection.
8. The valuation currency used is Naira

### 4.2 ACCOUNTING /FINANCIAL ANALYSIS

#### 4.2.1 NET PROFIT

The projected Annual Trading Profit and Loss Account is proposed to make the following Net Profit after tax during the corresponding projected periods – all things being equal.

#### 4.2.2 NET PRESENT VALUE (NPV)

NPV is one of the four methods of discounted cash flows techniques which state that money that is immediately available for use, has a greater value than same amount receivables in future date.

Using this method however, all net cash inflows will be discounted to present value using the estimated interest rate of 60% discount factor. At 12% discount factor the project produced a positive **NPV NGN 19,234,826**

#### 4.2.3 INTERNAL RATE OF RETURN (IRR)

This is the discount rate which gives zero NPV or the rate which equates the present value of cash inflows with present value of cash outflows of the project.

The cash flow of this project was discounted systematically until the NPV of the project finally become zero. The project produces the **IRR** of **47%**. Thus, the project accepted as being viable. This is because **IRR** is more than the cost of capital.

#### **4.2.4 ACCOUNTING RATE OF RETURN (ARR)**

ARR uses accounting information as revealed by financial statements (Income Statement) to measure profitability of the project under consideration. The forecast **ARR** of the project is **91%**.

#### **4.2.5 PROFITABILITY INDEX (PI)**

This is the present value of future cash flows over the present value of cash outlays. The project PI further confirm the viability of the project , because as the rules of the accepting and rejecting hold, a project should be accepted if the PI is equal or greater than one (1). Consequently, the PI of this project is **1.72** and thus recommended as being viable to be accepted for financing.

#### **4.2.6 PAYBACK PERIOD**

The payback period of any project is the length of time it would take the business investors to recover the capital invested in a project in spite of asset replacement. For this particular project the capital investment is expected to be fully recovered in about 10 months.

**APPENDIX I**  
**TOTAL PROJECT COST**

S/N	DESCRIPTION	QTY	UNIT PRICE	TOTAL
	<b>LAND AND BUILDING</b>			
1	Factory rentage	1	250,000	250,000
	<b>Sub total</b>	<b>1</b>	<b>250,000</b>	<b>250,000</b>
	<b>MACHINERY &amp; EQUIPMENT</b>			
2	Soldiering machine	1	10,000	10,000
3	Drill	1	10,000	10,000
4	Hand tools	10	6,250	62,500
	<b>Sub total</b>		<b>26,250</b>	<b>82,500</b>
	<b>UTILITY EQUIPMENT</b>			
5	Generating set	1	250,000	250,000
			<b>250,000</b>	<b>250,000</b>

## APPENDIX XII

### FORECAST IRR AND ARR COMPUTATION

$$IRR = a + \left( \frac{A}{A+B} \right) * (b-a)$$

Where

$$a = 12\%$$

$$b = 60\%$$

$$A = 19,234,826$$

$$B = 10,843,632$$

$$12\% + \frac{19,234,826}{19,234,826 + 10,843,632} (60-12)$$

$$12\% + 34.6$$

$$47\%$$

$$ARR = \frac{\text{Estimated Average Profit} \times 100}{\text{Estimated initial investment}}$$

$$ARR = \frac{5,470,513 \times 100}{6,039,000}$$

$$91\%$$
