APP REQUIREMENTS

1. The first step is to capture the personal details of the business owner and then generate a registration number for him. The format for the regno is CRS/LGA/number. For example CRS/ABI/1. The LGA codes are:

   ABI for Abi
   AKA for Akamkpa
   AKP for Akpabuyo
   BAK for Bakassi
   BEK for Bekwarra
   BIA for Biase
   BOK for Boki
   CAM for Calabar Municipal
   CAS for Calabar South
   ETU for Etung
   IKO for Ikom
   OBA for Obanliku
   OBU for Obubra
   OBD for Obudu
   ODU for Odukpani
   OGO for Ogoja
   YAK for Yakurr
   YAL for Yala

   There should be a table field to store the regno.

2. The second step is to capture each of all the shop outlets operated by the person captured in (1) above (That is, a one to many relationship), then generate a shop ID in the format: LGA/company/Number. For example YAL/BETNAIJA/1. There should be a table field to store the shop_ID

3. The owner's phone number should be the common field to relate with the two tables expected to be created.

4. Generate a registration slip for the business owner with his picture on it

5. I will send the list of the companies next.
